We will inform centres about any changes to the specification. We will also publish changes on our website. The latest version of our specification will always be the one on our website (ocr.org.uk) and this may differ from printed versions.

Introducing...
A Level Psychology (from September 2015)

Psychology is the scientific study of behaviour and the mind. It offers a unique educational experience that develops a distinctive and broad set of skills. It’s located in scientific method and allows scope for extensive evaluation from a range of perspectives.

Our A Level specification provides students with the exciting opportunity to gain a deeper understanding of psychology. Stimulating content is at the heart of this engaging qualification, which will encourage students to think like psychologists.

They will have the opportunity to develop a wide-ranging set of key skills, including being able to communicate effectively using appropriate language, to interpret and critically assess scientific data, and to research and critically evaluate a range of sources. The specification also encourages the development of strong literacy and numeracy skills. The acquisition of such a diverse range of skills will be of great benefit to your students in further education, the workplace and society in general.

Meet the team

We have a dedicated team of people working on our new A Level Psychology qualification.

Find out more about our Psychology team at [ocr.org.uk/psychologyteam](http://ocr.org.uk/psychologyteam)

If you need specialist advice, guidance or support, get in touch as follows:

- 01223 553998
- psychology@ocr.org.uk
- @OCRexams
Teaching and learning resources

We recognise that the introduction of a new specification can bring challenges for implementation and teaching. Our aim is to help you at every stage and we’re working hard to provide a practical package of support in close consultation with teachers and other experts, so we can help you to make the change.

Designed to support progression for all

Our resources are designed to provide you with a range of teaching activities and suggestions so you can select the best approach for your particular students. You are the experts on how your students learn and our aim is to support you in the best way we can.

We want to...

- Support you with a body of knowledge that grows throughout the lifetime of the specification
- Provide you with a range of suggestions so you can select the best activity, approach or context for your particular students
- Make it easier for you to explore and interact with our resource materials, in particular to develop your own schemes of work
- Create an ongoing conversation so we can develop materials that work for you.

Plenty of useful resources

You’ll have four main types of subject-specific teaching and learning resources at your fingertips:

- Delivery Guides
- Transition Guides
- Topic Exploration Packs
- Lesson Elements.

Along with subject-specific resources, you’ll also have access to a selection of generic resources that focus on skills development and professional guidance for teachers.

Skills Guides – we’ve produced a set of Skills Guides that are not specific to Psychology, but each covers a topic that could be relevant to a range of qualifications – for example, communication, legislation and research. Download the guides at ocr.org.uk/skillsguides

Active Results – a free online results analysis service to help you review the performance of individual students or your whole school. It provides access to detailed results data, enabling more comprehensive analysis of results in order to give you a more accurate measurement of the achievements of your centre and individual students. For more details refer to ocr.org.uk/activeresults
Professional development

Take advantage of our improved Professional Development Programme, designed with you in mind. Whether you want to come to face-to-face events, look at our new digital training or search for training materials, you can find what you’re looking for all in one place at the CPD Hub.

An introduction to the new specification

We’ll be running events to help you get to grips with our A Level Psychology qualification.

These events are designed to help prepare you for first teaching and to support your delivery at every stage.

Watch out for details at cpdhub.ocr.org.uk

To receive the latest information about the training we’ll be offering, please register for A Level email updates at ocr.org.uk/updates
1 Why choose an OCR A Level in Psychology?

1a. Why choose an OCR qualification?

Choose OCR and you’ve got the reassurance that you’re working with one of the UK’s leading exam boards. Our new A Level in Psychology course has been developed in consultation with teachers, employers and Higher Education to provide students with a qualification that’s relevant to them and meets their needs.

We’re part of the Cambridge Assessment Group, Europe’s largest assessment agency and a department of the University of Cambridge. Cambridge Assessment plays a leading role in developing and delivering assessments throughout the world, operating in over 150 countries.

We work with a range of education providers, including schools, colleges, workplaces and other institutions in both the public and private sectors. Over 13,000 centres choose our A levels, GCSEs and vocational qualifications including Cambridge Nationals and Cambridge Technicals.

Our Specifications

We believe in developing specifications that help you bring the subject to life and inspire your students to achieve more.

We’ve created teacher-friendly specifications based on extensive research and engagement with the teaching community. They’re designed to be straightforward and accessible so that you can tailor the delivery of the course to suit your needs.

We aim to encourage students to become responsible for their own learning, confident in discussing ideas, innovative and engaged. We provide a range of support services designed to help you at every stage, from preparation through to the delivery of our specifications. This includes:

- A wide range of high-quality creative resources including:
  - Delivery Guides
  - Transition Guides
  - Topic Exploration Packs
  - Lesson Elements
  - …and much more.

- Access to subject specialists to support you through the transition and throughout the lifetimes of the specifications.

- CPD/Training for teachers to introduce the qualifications and prepare you for first teaching.

- Active Results – our free results analysis service to help you review the performance of individual students or whole schools.

- ExamCreator – our new online past papers service that enables you to build your own test papers from past OCR exam questions.

All A level qualifications offered by OCR are accredited by Ofqual, the Regulator for qualifications offered in England. The accreditation number for OCR’s A Level in Psychology is QN601/5122/5

1b. Why choose an OCR A Level in Psychology?

This practical and engaging course has been redeveloped after feedback from teachers and other key stakeholders. The content has been designed to inspire, nurture and develop learners. The most popular aspects of previous qualifications have been retained or enhanced and new exciting content has been added.

The OCR A Level qualification in Psychology encourages learners to be inspired, motivated and challenged by following a broad, coherent, practical, satisfying and worthwhile course of study. The specification provides insight into, and experience of, how psychology works, stimulating learners’ curiosity and encouraging them to engage with psychology in their everyday lives, enabling them to make informed choices about further study and about career choices.
Aims and learning outcomes

The main purpose of this qualification is to prepare learners by providing a suitable foundation for the study of psychology or related courses in Higher Education.

A further purpose of this qualification is to prepare learners intending to pursue careers or further study in social sciences, or as part of a general education.

The OCR A Level qualification in Psychology enables learners to:

- develop essential knowledge and understanding of different areas of the subject and how they relate to each other
- develop and demonstrate a deep appreciation of the skills, knowledge and understanding of scientific methods
- develop competence and confidence in a variety of practical, mathematical and problem solving skills
- develop their interest in and enthusiasm for the subject, including developing an interest in further study and careers associated with the subject
- understand how society makes decisions about scientific issues and how the sciences contribute to the success of the economy and society.

1c. What are the key features of this specification?

The OCR A Level in Psychology is made up of three mandatory components, which are externally assessed.

Here are some of the key features of our new A Level in Psychology specification for you and your learners:

- straightforward structure, which includes focused content
- improved support, resources and teacher guidance
- a practical approach to the study of research methods
- a reworked core studies unit
- choice for teachers and learners with options in Applied psychology (Component 03)
- suitability for different learning styles
- the first year of this course is co-teachable with the OCR AS Level in Psychology qualification.

1d. How do I find out more information?

If already using OCR specifications you can contact us at: www.ocr.org.uk

If not already registered you can find out more information at www.ocr.org.uk

Want to find out more?
Ask a subject specialist
Email: psychology@ocr.org.uk
Telephone: 01223 553998
Join our Psychology community: http://social.ocr.org.uk/
2 The specification overview

2a. Overview of A Level in Psychology (H567)

Learners must complete all components (01, 02 and 03) to be awarded the OCR A Level in Psychology.

<table>
<thead>
<tr>
<th>Content Overview</th>
<th>Assessment Overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planning, conducting, analysing and reporting psychological research across a range of experimental and non-experimental methodologies and techniques.</td>
<td>Research methods (01)*&lt;br&gt;90 marks&lt;br&gt;written paper&lt;br&gt;2 hours 30% of total A level</td>
</tr>
<tr>
<td>Introduces some of the central areas of investigation in psychology organised in key themes. Each key theme is represented by a classic and a contemporary core study.</td>
<td>Psychological themes through core studies (02)*&lt;br&gt;105 marks&lt;br&gt;written paper&lt;br&gt;2 hours 35% of total A level</td>
</tr>
<tr>
<td>Compulsory section on Issues in mental health.</td>
<td>Applied psychology (03)&lt;br&gt;105 marks&lt;br&gt;written paper&lt;br&gt;2 hours 35% of total A level</td>
</tr>
</tbody>
</table>

Learners will also study two out of the following applied options: Child psychology, Criminal psychology, Environmental psychology, Sports and exercise psychology.

* Indicates synoptic assessment
Research methods (Component 01)

Learners will need to be familiar with the four main techniques for collecting/analysing data.

These are:

- self-report
- experiment
- observation
- correlation.

Learners will also need to be familiar with the following:

- planning and conducting research
- data recording, analysis and presentation
- report writing
- science in psychology.

Learners will be expected to carry out their own small scale practical activities and reflect on their experiences.

Psychological themes through core studies (Component 02)

Learners will need to be familiar with the ten key themes and the classic and contemporary core study located within each.

Learners will also need to be familiar with the following:

- areas and perspectives in psychology
- methodological issues relating to the core studies
- debates in psychology.

Applied psychology (Component 03)

Learners will need to be familiar with one compulsory section, Issues in mental health, which provides an introduction to the topic of mental health.

Learners will also study two out of the following applied psychology options:

- Child psychology
- Criminal psychology
- Environmental psychology
- Sports and exercise psychology.

Learners will need to be familiar with the issues and debates that run through this component.
2c. Content of Research methods (Component 01)

This component introduces and develops knowledge and understanding of the process of planning, conducting, analysing and reporting psychological research across a range of experimental and non-experimental methodologies and techniques.

It promotes an understanding of the methods of scientific enquiry used in empirical research and aims to develop relevant knowledge and skills for this process. It also encourages the acquisition of a range of evaluative concepts for reviewing and discussing the design and outcomes of research, and the application of such knowledge to the wider community, society and the economy.

Competency and confidence in a variety of mathematical procedures and problem-solving skills should also be gained through involvement with practical work associated with the concepts covered.

Where possible and appropriate, links should be made with the content of the other components, for example, to illustrate the use of a particular statistical technique or application of evaluative issues.

Learners are expected to use appropriate methodology, including information and communication technology.

Research methods and techniques

<table>
<thead>
<tr>
<th>1.1 Research methods and techniques</th>
<th>Learners should have knowledge and understanding of the following research methods and techniques and their associated strengths and weaknesses:</th>
</tr>
</thead>
</table>
| Experiment                         | • laboratory experiment  
• field experiment  
• quasi experiment.                                                            |
| Observation                        | • structured  
• unstructured  
• naturalistic  
• controlled  
• participant  
• non-participant  
• overt  
• covert.                                                                   |
| Self-report                        | • questionnaire  
• Interviews:  
  • structured, semi-structured, unstructured.                                |
| Correlation                        | • obtaining data for correlational analysis  
• positive correlation  
• negative correlation  
• no correlation.                                                            |
### 1.2 Planning and conducting research

Learners should be familiar with the following features of planning and conducting research and their associated strengths and weaknesses:

| Aims and hypotheses and how to formulate | • research aim  
• research question  
• null hypotheses  
• alternative hypotheses  
• one-tailed (directional) hypotheses  
• two-tailed (non-directional) hypotheses. |
|------------------------------------------|--------------------------------------------------|
| Populations, samples and sampling techniques | • target population and sample  
• random sampling  
• snowball sampling  
• opportunity sampling  
• self-selected sampling. |
| Experimental designs | • repeated measures design  
• independent measures design  
• matched participants design. |
| Variables and how they are operationalised | • independent variable (IV)  
• dependent variable (DV)  
• control of extraneous variables. |
| Designing observations | • behavioural categories  
• coding frames  
• time sampling  
• event sampling. |
| Designing self-reports | • open questions  
• closed questions  
• rating scales:  
  o Likert rating scale, Semantic differential rating scale. |
## 1.3 Data recording, analysis and presentation

Learners should be able to demonstrate knowledge and understanding of the process and procedures involved in the collection, analysis and presentation of data. This will necessitate the ability to perform some calculations (please see Appendix 5b for examples of mathematical requirements).

<table>
<thead>
<tr>
<th>Raw data</th>
</tr>
</thead>
<tbody>
<tr>
<td>- design of raw data recording tables</td>
</tr>
<tr>
<td>- use of raw data recording tables</td>
</tr>
<tr>
<td>- standard and decimal form</td>
</tr>
<tr>
<td>- significant figures</td>
</tr>
<tr>
<td>- make estimations from data collected</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Levels and types of data</th>
</tr>
</thead>
<tbody>
<tr>
<td>- nominal level data</td>
</tr>
<tr>
<td>- ordinal level data</td>
</tr>
<tr>
<td>- interval level data</td>
</tr>
<tr>
<td>- quantitative data</td>
</tr>
<tr>
<td>- qualitative data</td>
</tr>
<tr>
<td>- primary data</td>
</tr>
<tr>
<td>- secondary data</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Descriptive statistics</th>
</tr>
</thead>
<tbody>
<tr>
<td>- measures of central tendency</td>
</tr>
<tr>
<td>o mode, median, mean</td>
</tr>
<tr>
<td>- measures of dispersion</td>
</tr>
<tr>
<td>o variance, range, standard deviation</td>
</tr>
<tr>
<td>- ratio</td>
</tr>
<tr>
<td>- percentages</td>
</tr>
<tr>
<td>- fractions</td>
</tr>
<tr>
<td>- frequency tables (tally chart)</td>
</tr>
<tr>
<td>- line graph</td>
</tr>
<tr>
<td>- pie charts</td>
</tr>
<tr>
<td>- bar charts</td>
</tr>
<tr>
<td>- histograms</td>
</tr>
<tr>
<td>- scatter diagram</td>
</tr>
</tbody>
</table>
### Inferential statistics
- normal distribution curves
- skewed distribution curves
- probability
- significance levels
- using statistical tables of critical values
- criteria for using a parametric test
- criteria for using a specific non-parametric inferential test (Mann-Whitney U test, Wilcoxon Signed Ranks test, Chi-square, Binomial Sign test and Spearman’s Rho)
- understand the use of specific non-parametric inferential tests (Mann-Whitney U test, Wilcoxon Signed Ranks test, Chi-square, Binomial Sign test and Spearman’s Rho)
- type 1 errors
- type 2 errors
- symbols: $=$, $<$, $<<$, $>>$, $>$, $\propto$, $\sim$.

### Methodological issues
- representativeness
- generalisability
- reliability:
  - Internal, External, Inter-rater, Test-retest, Split-half
- validity:
  - Internal, Face, Construct, Concurrent, Criterion, External, Population, Ecological
- demand characteristics
- social desirability
- researcher/observer bias
- researcher/observer effect(s)
- ethical considerations, including the British Psychological Society’s Code of Ethics and Conduct:
  - Respect – informed consent, right to withdraw, confidentiality
  - Competence
  - Responsibility – protection of participant, debrief
  - Integrity – deception
Report writing

1.4 Report writing

Learners should have knowledge of the conventions of reporting research in a practical report and demonstrate understanding of the role and purpose of each of the main sections and sub-sections.

Sections and sub-sections of a practical report

- abstract
- introduction
- method (design, sample, materials/apparatus, procedure)
- results
- discussion
- references
- appendices.

Citing academic references

Peer review

- appreciate the role of the psychological community in validating new knowledge and ensuring integrity through the process of peer review.

Practical activities

1.5 Practical activities

Learners are expected to conduct and analyse their own small-scale research practicals, including appropriate risk assessment and management, (please see appendix 5d).

In order to become fully familiar with the content of this component, it is suggested that learners create a research portfolio using appropriate information communication technology and write-up the practicals they conduct.

Learners should have experience of the following practical activities:

- self-report
- observation
- experiment
- correlation.
### 1.6 How science works

Learners should understand how society makes decisions about scientific issues and how psychology contributes to the success of the economy and society. Learners should be aware of the nature and principles of scientific enquiry through knowledge and understanding of the following concepts:

- the study of cause-and-effect
- falsification
- replicability
- objectivity
- induction
- deduction
- hypothesis testing
- manipulation of variables
- control and standardisation
- quantifiable measurements.
2c. Content of Psychological themes through core studies (Component 02)

Psychological themes through core studies (Component 02) aims to develop the critical thinking and independent learning skills essential to the scientific study of psychology through a focus on some of the key themes investigated within the subject. For each key theme, learners are presented with both a classic and a contemporary study. The classic studies are ‘landmark’ pieces of research that have helped to shape the course of the subject and which all learners of psychology should become familiar with.

The contemporary studies are more ‘up-to-date’ pieces of research that engage in some way with the issues being explored in the classic studies they are paired with. The core studies chosen reflect the contribution of psychology to an understanding of individual, social and cultural diversity.

It also develops learners’ ability to make evaluative points about the studies and their ability to see the studies in the wider perspective of psychological areas/perspectives, issues and debates.

Section A: Core studies

| **Core studies in their pairs**                                         |
| • How the two studies are similar.                                       |
| • How the two studies are different.                                     |
| • To what extent the contemporary study changes our understanding of the key theme. |
| • To what extent the contemporary study changes our understanding of individual, social and cultural diversity. |

| **Methodological issues**                                               |
| • The strengths and weaknesses of the different research methods and techniques. |
| • The strengths and weaknesses of different types of data.              |
| • Ethical considerations.                                               |
| • Validity                                                              |
| • Reliability.                                                          |
| • Sampling bias.                                                       |
| • Ethnocentrism.                                                       |

| **Key themes and areas of psychology**                                  |
| • How each core study relates to its key theme.                         |
| • How each core study relates to the area of psychology it is placed within. |
Section B: Areas, perspectives and debates

In this section, learners will be asked questions that invite them to generate an extended discussion, recognising the inter-relationship between different areas, perspectives and debates in psychology. They will not be limited in terms of the studies they can refer to in their answers. The specification places core studies within particular areas, but learners may make reference to studies from across the components and may also argue that a core study placed within one area can be seen as falling within another area.

Studies that come from a behaviourist perspective include Bandura's research into transmission of aggression and Chaney's Funhaler study, while psychodynamic ideas are referred to in the research by Freud (Little Hans), Kohlberg (stages of moral development) and Hancock (language of psychopaths); however, learners may refer to other studies.

<table>

</table>

Studies that come from a behaviourist perspective include Bandura's research into transmission of aggression and Chaney's Funhaler study, while psychodynamic ideas are referred to in the research by Freud (Little Hans), Kohlberg (stages of moral development) and Hancock (language of psychopaths); however, learners may refer to other studies.
## Section C: Practical applications

In order to encourage awareness of practical applications of psychology, this section will require learners to apply their knowledge and understanding of psychology to a novel source as provided in the examination. The source could be a newspaper or magazine article, a blog, a diary entry, email exchange or equivalent written source. It is advised that teachers prepare learners for this section by giving them a variety of sources to consider.

<table>
<thead>
<tr>
<th>Practical applications</th>

</tr>
</thead>
<tbody>
<tr>
<td><strong>The practical applications of psychology</strong></td>
<td>• Recognise the psychological content in the source.</td>
</tr>
<tr>
<td></td>
<td>• Make evidence-based suggestions in relation to the source.</td>
</tr>
<tr>
<td></td>
<td>• Consider the strengths and weaknesses of the suggestion(s) they themselves are making.</td>
</tr>
</tbody>
</table>
2c. Content of Applied psychology (Component 03)

This component consists of one compulsory section:
- Issues in mental health.

Learners will also choose to study two out of the following applied psychology options:
- Child psychology
- Criminal psychology
- Environmental psychology
- Sports and exercise psychology.

Each topic contains the following:

**Background**
With reference to psychology, learners should be able to explain and exemplify the background and consider relevant issues and debates in relation to the topic area.

**Key research**
Learners should be able to describe the key research and appreciate how it relates to the topic area.

**Application**
Learners should be able to relate the application to a novel situation.

There are a number of methodological issues and debates that run throughout Applied psychology (Component 03).

The assessment will require learners to apply these issues and debates across a range of topics, further developing the material in the specification and making links between the issues and debates and the content of this component.

<table>

<td>At least one strategy for training for and playing spectator sports.</td>
</tr>
</tbody>
</table>

For full references please see Appendix 5f.
2d. Prior learning, knowledge and progression

No prior knowledge of the subject is required. The specification builds on, but does not depend on, the knowledge, understanding and skills specified for GCSE Psychology.

It is recommended that learners have attained communication and literacy skills at a level equivalent to GCSE (9–1) in English Language or GCSE (9–1) in English Literature.

Throughout the course of study learners are encouraged to develop an awareness of the role of psychology in society and its applications to many situations.

The qualification is therefore suitable for learners intending to pursue any career in which an understanding of human behaviour is needed. The qualification is also suitable for any further study in social sciences, or as part of a course of general education.

There is an emphasis on research skills and enquiry in order to enable the learner to progress into higher levels of education. The specification therefore provides a suitable foundation for the study of psychology and/or related courses in Higher Education.
3 Assessment of OCR A level in Psychology

3a. Forms of assessment

Research methods (Component 01)

Learners are permitted to use a scientific or graphical calculator for Research methods (Component 01). Calculators are subject to the rules in the document Instructions for Conducting Examinations, published annually by JCQ (www.jcq.org.uk). At least 30 of the marks available for this component will be for assessment of mathematics in the context of psychology.

Section A: Multiple choice

20 questions from across the component content. Questions could also relate to the research methods used in the core studies.

Section B: Research design and response

Assessment will focus on a novel source. The themes for questions will be:

- the planning and design of research
- the evaluation of research
- improvements to research.

Section C: Data analysis and interpretation

This section will require learners to analyse and interpret novel data or a piece of hypothetical research using descriptive and/or inferential statistics.

Psychological themes through core studies (Component 02)

Section A: Core studies

Questions based on the core studies individually, in their pairs or in terms of their key theme.

Section B: Areas, perspectives and debates

Questions will focus on areas, perspectives and debates.

Section C: Practical applications

Questions will require learners to apply their knowledge and understanding of psychology to a novel source.

Applied psychology (Component 03)

Section A: Issues in mental health

Compulsory questions. These will range from short answer to extended response questions.

Section B: Options

Learners answer one question from each of the two options they have studied. Each question will have three question parts. Section B has four options:

- Child psychology
- Criminal psychology
- Environmental psychology
- Sport and exercise psychology.
3b. Assessment objectives (AO)

There are three assessment objectives in OCR’s A Level in Psychology.

These are detailed in the table below. Learners are expected to demonstrate their ability to:

<table>
<thead>
<tr>
<th>Assessment Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO1</td>
</tr>
<tr>
<td>AO2</td>
</tr>
<tr>
<td>AO3</td>
</tr>
</tbody>
</table>

AO weightings in OCR A Level in Psychology

The relationship between the assessment objectives and the components are shown in the following table:

<table>
<thead>
<tr>
<th>Component</th>
<th>% of overall A level</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>AO1</td>
</tr>
<tr>
<td>Research methods (01)</td>
<td>9–11</td>
</tr>
<tr>
<td>Psychological themes through core studies (02)</td>
<td>13–15</td>
</tr>
<tr>
<td>Applied psychology (03)</td>
<td>8–9</td>
</tr>
<tr>
<td>Total</td>
<td>30–35%</td>
</tr>
</tbody>
</table>

3c. Assessment availability

There will be one examination series available each year in May/June to all learners. All examinations must be taken in a single examination series. This specification will be certificated from the June 2017 examination series onwards.
3d. Retaking the qualification

Learners can retake the qualification as many times as they wish. They retake all components of the qualification.

3e. Assessment of extended responses

The assessment materials for this qualification provide learners with the opportunity to demonstrate their ability to construct and develop a sustained and coherent line of reasoning and marks for extended responses are integrated into the marking criteria.

3f. Synoptic assessment

Synoptic assessment draws together the knowledge, understanding and skills learnt in different aspects of the A level course. Synoptic assessment allows learners to demonstrate their understanding between different aspects of the subject. Synoptic assessment is included in both Component 01 and Component 02. Learners are encouraged to think holistically and develop their skills of thinking as a psychologist.

3g. Calculating qualification results

A learner’s overall qualification grade for OCR A Level in Psychology will be calculated by adding together their marks from the three components taken to give their total weighted mark. This mark will then be compared to the qualification level grade boundaries for the qualification for the relevant exam series to determine the learner’s overall qualification grade.
4 Admin: what you need to know

The information in this section is designed to give an overview of the processes involved in administering this qualification so that you can speak to your exams officer. All of the following processes require you to submit something to OCR by a specific deadline. More information about these processes, together with the deadlines, can be found in the OCR Admin Guide and Entry Codes: 14–19 Qualifications, which can be downloaded from the OCR website: www.ocr.org.uk

4a. Pre-assessment

Estimated entries

Estimated entries are your best projection of the number of learners who will be entered for a qualification in a particular series. Estimated entries should be submitted to OCR by the specified deadline. They are free and do not commit your centre in any way.

Final entries

Final entries provide OCR with detailed data for each learner, showing each assessment to be taken. It is essential that you use the correct entry, considering the relevant entry rules. Final entries must be submitted to OCR by the published deadlines or late entry fees will apply.

All learners taking OCR A Level in Psychology must be entered for H567.

<table>
<thead>
<tr>
<th>Entry code</th>
<th>Title</th>
<th>Component code</th>
<th>Component title</th>
<th>Assessment type</th>
</tr>
</thead>
<tbody>
<tr>

<td>02</td>
<td>Psychological themes through core studies</td>
<td>External Assessment</td>
</tr>
<tr>
<td></td>
<td></td>
<td>03</td>
<td>Applied psychology</td>
<td>External Assessment</td>
</tr>
</tbody>
</table>
4b. Accessibility and special consideration

Reasonable adjustments and access arrangements allow learners with special educational needs, disabilities or temporary injuries to access the assessment and show what they know and can do, without changing the demands of the assessment. Applications for these should be made before the examination series.

Detailed information about eligibility for access arrangements can be found in the JCQ Access Arrangements and Reasonable Adjustments.

Special consideration is a post-assessment adjustment to marks or grades to reflect temporary injury, illness or other indisposition at the time the assessment was taken.

Detailed information about eligibility for special consideration can be found in the JCQ A guide to the special consideration process.

4c. External assessment arrangements

Regulations governing examination arrangements are contained in the JCQ Instructions for conducting examinations.

Learners are permitted to use a scientific or graphical calculator for component 01. Calculators are subject to the rules in the document Instructions for Conducting Examinations published annually by JCQ (www.jcq.org.uk).

Head of Centre Annual Declaration

The Head of Centre is required to provide a declaration to the JCQ as part of the annual NCN update, conducted in the autumn term, to confirm that the centre is meeting all of the requirements detailed in the specification.

Any failure by a centre to provide the Head of Centre Annual Declaration will result in your centre status being suspended and could lead to the withdrawal of our approval for you to operate as a centre.
4d. Results and certificates

Grade scale

A level qualifications are graded on the scale: A*, A, B, C, D, E, where A* is the highest. Learners who fail to reach the minimum standard for E will be Unclassified (U). Only subjects in which grades A* to E are attained will be recorded on certificates.

Results

Results are released to centres and learners for information to allow any queries to be resolved before certificates are issued.

Centres will have access to the following results’ information for each learner:

- the grade for the qualification
- the raw mark for each component
- the total weighted mark for the qualification.

The following supporting information will be available:

- raw mark grade boundaries for each component
- weighted mark grade boundaries for each qualification.

Until certificates are issued, results are deemed to be provisional and may be subject to amendment. A learner’s final results will be recorded on an OCR certificate. The qualification title will be shown on the certificate as ‘OCR Level 3 Advanced GCE in Psychology’.

4e. Post-results services

A number of post-results services are available:

- Enquiries about results – If you are not happy with the outcome of a learner’s results, centres may submit an enquiry about results.
- Missing and incomplete results – This service should be used if an individual subject result for a learner is missing, or the learner has been omitted entirely from the results supplied.
- Access to scripts – Centres can request access to marked scripts.

4f. Malpractice

Any breach of the regulations for the conduct of examinations and coursework may constitute malpractice (which includes maladministration) and must be reported to OCR as soon as it is detected.

Detailed information on malpractice can be found in the JCQ Suspected Malpractice in Examinations and Assessments: Policies and Procedures.
5  Appendices

5a. Overlap with other qualifications

There is a small degree of overlap between the content of this specification and that for the current OCR A Level in Physical Education.

5b. Avoidance of bias

The A level qualification and subject criteria have been reviewed in order to identify any feature which could disadvantage learners who share a protected characteristic as defined by the Equality Act 2010. All reasonable steps have been taken to minimise any such disadvantage.
5c. Mathematical requirements (Component 01)

Within A Level in Psychology, 10% of the marks available within written examinations will be for assessment of mathematics (in the context of psychology) at a Level 2 standard, or higher. Lower level mathematical skills may still be assessed within examination papers but will not count within the 10% weighting for psychology. All assessment of these skills will be in the component 1 examination.

The following will be counted as Level 2 (or higher) mathematics:

• application and understanding requiring choice of data or equation to be used
• problem solving involving use of mathematics from different areas of maths and decisions about direction to proceed

Questions involving use of A level mathematical content (as of 2012), e.g. use of logarithmic equations.

The following will not be counted as Level 2 mathematics:

• simple substitution with little choice of equation or data
• structured question formats using GCSE mathematics (based on 2012 GCSE mathematics content).

The table below provides some examples of the mathematical requirements which will be assessed in Component 01.

<table>
<thead>
<tr>
<th>Mathematical skills</th>
<th>Exemplification of mathematical skill in the context of A level psychology (assessment is not limited to the examples given below)</th>
</tr>
</thead>
<tbody>
<tr>
<td>D.0 – arithmetic and numerical computation</td>
<td></td>
</tr>
<tr>
<td>D.0.1</td>
<td>Recognise and use expressions in decimal and standard form</td>
</tr>
<tr>
<td>D.0.2</td>
<td>Use ratios, fractions and percentages</td>
</tr>
<tr>
<td>D.0.3</td>
<td>Estimate results</td>
</tr>
<tr>
<td>D.1 – handling data</td>
<td></td>
</tr>
<tr>
<td>D.1.1</td>
<td>Use an appropriate number of significant figures</td>
</tr>
<tr>
<td>D.1.2</td>
<td>Find arithmetic means</td>
</tr>
<tr>
<td>D.1.3</td>
<td>Construct and interpret frequency tables and diagrams, bar charts and histograms</td>
</tr>
<tr>
<td>D.1.4</td>
<td>Understand simple probability</td>
</tr>
<tr>
<td>D.1.5</td>
<td>Understand the principles of sampling as applied to scientific data</td>
</tr>
</tbody>
</table>
### D.1.6 Understand the terms mean, median and mode
For example, explaining the differences between the mean, median and mode and selecting which measure of central tendency is most appropriate for a given set of data. Calculate standard deviation

### D.1.7 Use a scatter diagram to identify a correlation between two variables
For example, plotting two variables from an investigation on a scatter diagram and identifying the pattern as a positive correlation, a negative correlation or no correlation.

### D.1.8 Use a statistical test
For example, calculating a non-parametric test of differences using data from a given experiment.

### D.1.9 Make order of magnitude calculations
For example, estimating the mean test score for a large number of participants on the basis of the total overall score.

### D.1.10 Distinguish between levels of measurement
For example, stating the level of measurement (nominal, ordinal or interval) that has been used in a study.

### D.1.11 Know the characteristics of normal and skewed distributions
For example, being presented with a set of scores from an experiment and being asked to indicate the position of the mean (or median, or mode).

### D.1.12 Select an appropriate statistical test
For example, selecting a suitable inferential test for a given practical investigation and explaining why the chosen test is appropriate.

### D.1.13 Use statistical tables to determine significance
For example, using an extract from statistical tables to say whether or not a given observed value is significant at the 0.05 level of significance for a one-tailed test.

### D.1.14 Understand measures of dispersion, including standard deviation and range
For example, explaining why the standard deviation might be a more useful measure of dispersion for a given set of scores e.g. where there is an outlying score.

### D.1.15 Understand the differences between qualitative and quantitative data
For example, explaining how a given qualitative measure (for example, an interview transcript) might be converted into quantitative data.

### D.1.16 Understand the difference between primary and secondary data
For example, stating whether data collected by a researcher dealing directly with participants is primary or secondary data.

### D.2 – algebra

#### D.2.1 Understand and use the symbols: =, <, <=, >=, >, ≈, ~.
For example, expressing the outcome of an inferential test in the conventional form by stating the level of significance at the 0.05 level or 0.01 level by using symbols appropriately.

#### D.2.2 Substitute numerical values into algebraic equations using appropriate units for physical quantities
For example, inserting the appropriate values from a given set of data into the formula for a statistical test e.g. inserting the N value (for the number of scores) into the Chi Square formula.

#### D.2.3 Solve simple algebraic equations
For example, calculating the degrees of freedom for a Chi Square test.
D.3 – graphs

<p>| | |</p>

5d. Risk Assessment and Management

In UK law, health and safety is primarily the responsibility of the employer. In a school or college the employer could be a local education authority, the governing body or board of trustees. Employees, (teachers/lecturers, technicians etc), have a legal duty to cooperate with their employer on health and safety matters.

Useful advice for education establishments on the requirements for risk assessment can be found at http://www.hse.gov.uk/services/education/index.htm

There is no specific legal requirement that detailed risk assessment forms should be completed for each practical activity, although a minority of employers may require this.
